### ELECTION

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

**additives**, which enhance adherence of a quaternary antimuscarinic compound (as herein claimed) to the subject's bladder wall and prolong duration of action, compared to when the compound is not in a composition containing the additive.

Applicants are required, in reply to this Action, to elect a single specie - that is an additive - to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

In order for the election of a compound species to be considered fully responsive to this requirement, the election must include the name and structure of the compound elected, the location of the species within both the claims and specification and the definition of all substitutions.

Upon the allowance of a generic claim, Applicants will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, Applicants must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner:

as methods of treating a bladder disease in a subject comprising intravesically administering a pharmaceutical composition comprising a therapeutic amount of a quaternary antimuscarinic compound, as herein disclosed, and an additive that enhances adherence of said compound to the subject's bladder wall and prolongs duration of action compared to when the compound is not in a composition containing the additive.

The following claims are generic: 1-23 and 25-34.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: The plethora of compounds that are encompassed in the instant claim language, i.e., additives, which enhance adherence of a quaternary antimuscarinic compound (as herein claimed) to the subject's bladder wall and prolong duration of action, compared to when the compound is not in a composition containing the additive, are not obvious variants, based on their diverse functionalities.

The election of species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should Applicants traverse on the ground that the species are not patentably distinct, Applicants should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the Examiner finds one of the inventions

unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103 (a) of the other invention.

Applicants are reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
